

HELPING CHILDREN HOLD THE SCREEN AT A **SAFE DISTANCE** FROM THEIR EYES.

BACKGROUND:

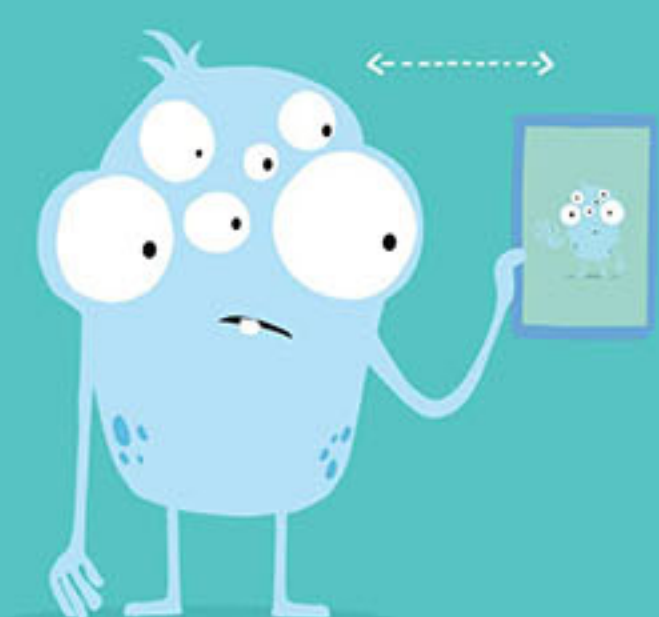

Children are holding screens dangerously close to their eyes. Parents are struggling to change this behavior.

IDEA:

We created an app that makes sure children hold the screen at an ideal distance from their eyes.

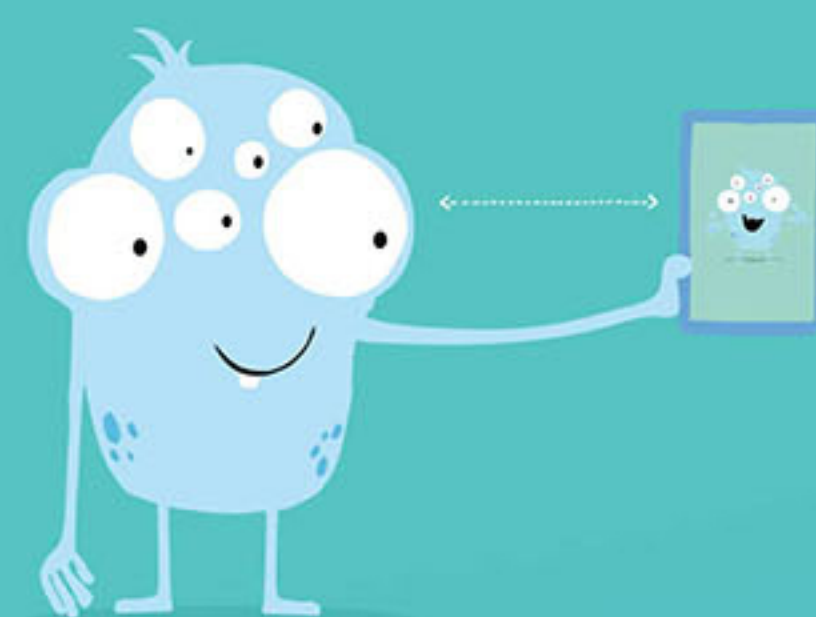

HOW IT WORKS:

The app operates in the background using facial recognition.

When the screen is too close to the child's eyes, the app blocks the screen.

It only becomes unblocked when the child moves back.
